

“Greta vs. Pollution” is an interactive game about the importance of saving fish from pollution. It gives visuals of dead fish and healthy fish to help the player understand the urgency and deadly nature of pollution. Greta has become an icon of sorts for the movement towards a greener future, so having her shoot at the cans symbolizes all the ways she fights pollution. If time runs out before Greta (aka the user) combats pollution, the dystopian polluted environment replaces the blue ocean and all the fish die.
